Seattle, WA
(610) 547-1264

Relevant Experience

- Google**, Software Engineer L4 [August 2022 – Present]
- Architected a tenant-isolated fault injection system for a stack of >50 microservices; replaced cell-wide simulation bottlenecks with a distributed update algorithm (accelerated promotion).
 - Optimized resource availability in cross-team strategy allowing \$1M+/day customer contracts.
 - Designed feature expansions for encrypted cloud-based virtual hard drive SKUs, focusing on at-rest recompression to support high-scale enterprise workloads.
 - Operated as a domain mentor for senior engineering staff.
- Kulicke and Soffa**, Computer Vision Engineer [September 2020 - March 2021]
- Researched and tested deep learning solutions for proprietary semiconductor applications.
 - Established infrastructure for image processing and data collection for deep learning.
 - Designed and built general-purpose, highly extensible image processing shell.
 - Reimplemented client application for a cross-platform framework.
- Lockheed Martin RMS**, Systems Engineer [September 2019 - March 2020]
- Architected GPU programming hardware acceleration solution with NVIDIA's CUDA for C++.
 - Authored internal educational material for introductory and advanced GPU programming.
 - Formulated original GPU programming techniques for novel algorithmic applications.
 - Automated UNIX-based version control and testing procedures for engineering teams.

Education

- Drexel University**, Pennoni Honors College (STAR Scholar) [September 2018 - June 2022]
Bachelors of Science in Computer Science (Accelerated MS) 3.78 GPA, Magna Cum Laude
- Digital Pathology**, Project Lead, Lead ML Engineer [September 2021 - June 2022]
- Led 7-person team in continuing multi-year open-source Deep Learning BioInformatics project.
 - Created and applied Deep Learning model development infrastructure for sinusitis severity classification using Docker, PyTorch, AWS, and Gang-of-Four Architectural Patterns.
 - Improved previous years' performance by 34%
 - Created containerized, user-facing model deployment solution for stakeholders using Flask.

Skills and Activities

- Cloud Skills** Distributed Systems, Microservices, Block Storage, Fault Tolerance, Scale Management
Team Skills Maintainable Architecture, Prompting, Scope Management, Planning, Communication
Clearance United States Government Secret Security Clearance (Exp 2024)
Hobbies Reading, 3D Modeling, Strategy Board Games and Design
Interests Economics, History, Philosophy, Policy, Psychology
